

United States Government Configuration Baseline (USGCB) Compliance Statement

The United States Government Configuration Baseline (USGCB) is a security configuration for Information Technology products deployed across federal agencies. The USGCB evolved from the Federal Desktop Core Configuration (FDCC) mandate. The defragmentation software from Diskeeper Corporation has been tested to verify compliance with the USGCB under Windows 7, using a SCAP validated tool with USGCB scanner capability.

- Diskeeper® 2010 is fully functional and operates correctly as intended on systems using the USGCB under Windows® 7.
- The standard installation, operation, maintenance, update of Diskeeper 2010 does not alter the configuration settings from the approved USGCB configuration. Diskeeper uses the Windows Installer Service for installation to the default "program files" directory and is able to silently install and uninstall.
- Diskeeper 2010 performs correctly on a standard user level account in all functional areas under Windows 7.

Please contact Diskeeper Corporation with any questions about Diskeeper 2010 USGCB compliance.
