United States Government Configuration Baseline (USGCB) Compliance Statement

The United States Government Configuration Baseline (USGCB) is a security configuration for Information Technology products deployed across federal agencies.

The USGCB evolved from the Federal Desktop Core Configuration (FDCC) mandate.

The storage performance software from ConduSiv Technologies has been tested to verify compliance with the USGCB under Windows 7, using a SCAP validated tool with USGCB scanner capability.

- Diskeeper® 12 is fully functional and operates correctly as intended on systems using the USGCB under Windows® 7.
- The standard installation, operation, maintenance, update of Diskeeper 12 does not alter the configuration settings from the approved USGCB configuration.
- Diskeeper uses the Windows Installer Service for installation to the default "program files" directory and is able to silently install and uninstall.
- Diskeeper 12 performs correctly on a standard user level account in all functional areas under Windows 7.

Please contact ConduSiv Technologies with any questions about Diskeeper 12 USGCB compliance.
