

## FEDERAL GOVERNMENT REFERENCES

*"I have been very impressed with Diskeeper. I elected to use the default Automatic defrag as our users always have a number of different applications open. When the system has to swap something out to the hard drive it is good to know that it is constantly being defragmented by the Diskeeper software. All our systems are very responsive. This is especially apparent when using remoting software across a WAN link.*

*"I only have to install Diskeeper and it takes care of the rest. It is a "Set It and Forget It" product that does its job. We have used Diskeeper for a long time and have always been happy with the results and with the company in general."*

Mark T. Scott, LAN Administrator, U.S. Bankruptcy Court - Western District of Louisiana

*"I am very pleased with Diskeeper on our servers. It has demanded very little of our time and makes a difference in performance on our servers, especially on the older systems. After I found out about the IntelliWrite technology, I downloaded an evaluation copy for use at home and saw where it has helped improve the performance of my old PC."*

Flint Boardman, IT Specialist & Webmaster, Mesa Verde National Park

*"Diskeeper is excellent for keeping our system nicely defragmented. I really like the Automatic defrag; it is doing a very nice job in keep my system running smoothly. Diskeeper does pay for itself and I recommend this product to other groups."*

Bill W. Ou, Lawrence Berkeley National Laboratory

*"IntelliWrite prevents up to 93% of fragmented files before it happens, saving in the defrag time as well as wear on the hard drives. Diskeeper is very easy to deploy and manage and I do not see significant performance reduction on my servers. Diskeeper gives status of my servers through an email notification each day alerting me of any issues. I would recommend this product to anyone looking for a solution to manage fragmentation on their systems."*

Ben Hamby, Contractor / Team Lead, Dept of Homeland Security

*"We have been using Diskeeper for over ten years; it is installed on every PC that comes into our division. We installed Hyperfast on all of our Samsung SSD's. I had a laptop with SSD and it started running slower. I bought Diskeeper with HyperFast, then put it on the laptop and in one day of running the systems was like new. Diskeeper makes my job a whole lot easier."*

Jeffrey Meisner, Network Administrator, Fermi National Accelerator Lab
