

DISKEEPER IS EASY TO INSTALL AND USE

“Gordon Brothers has used Diskeeper Server for over ten years on all of our servers running the Microsoft Windows operating system. It is extremely easy to install and just does its job in the background. We are obviously extremely pleased with the product.”

“Since installing Diskeeper on our PC’s the performance has improved significantly. Diskeeper contributes to us rarely needing to replace a failed hard drive. HelpDesk tickets related to performance and hard disk failure have definitely decreased significantly since we began using Diskeeper.”

“We really like the new features such as the ‘efficient’ defragmentation method. We are also seeing almost 100% fragmentation prevented by IntelliWrite, which certainly cuts down dramatically on disk drive usage. Diskeeper also poses no stability issues for our PCs.”

Joseph F. McEachern, IT Manager, Gordon Brothers Group

“The Diskeeper upgrades went very smoothly. We have the Administrator so rolling out the upgrades is easy from the Diskeeper standpoint. We haven’t had any issues at all with these deployments on more than 300 servers we upgraded.”

“IntelliWrite technology and Instant Defrag do an excellent job of keeping fragmentation from accumulating. Anecdotally, I’ve noticed fewer servers showing up in the Dashboard with moderate or critical fragmentation. And even when they do show up, the fragmentation is milder than previously. The Instant Defrag makes a noticeable difference.”

Jason Tallon, IT Director, Rapid City Regional Health

“We have not used the built-in defrag in several years. It consumed more CPU, required scheduling, and had conflicts with SQL locked files and other custom applications we run. Diskeeper resolved all of these issues, and the one issue we did have with a poorly-written app confliction, your software engineers worked with us to find the issue, then sent a patch to resolve it - very efficient.”

“With the Diskeeper Admin Console, upgrades and deployments are very simple; scan, select, and deploy, then watch the report update. It doesn’t get much easier than that.”

Charlie Brown, UnumProvident #239 Fortune 500 list

“We use Diskeeper on Windows 2003/2008 Servers and on all of our Windows 7 Workstations. Diskeeper works quite well keeping the hard drives defragged and running smoothly. Using Diskeeper on our servers helps us keep our relatively simple network even easier to manage.”

“The biggest benefit is using the Administrative Console, pushing out installs and connecting to workstations to schedule maintenance times. Diskeeper helps with ensuring the hard drives installed on our computers run optimally.”

“I most definitely recommend Diskeeper to others. In fact, I teach a Computer Maintenance course for our patrons, several times a year, and always recommend Diskeeper as a product everyone should purchase to help keep hard drives running error free.”

Peter W. Caton, North Suburban Library

“Diskeeper is an excellent product. I have deployed some of the licenses that we have, focusing on servers that did not seem to be performing well. We use an IBM XIV SAN for the virtual hard drives of our VMware virtual machines, and some physical servers also have SAN-attached drives. On the servers that I’ve deployed Diskeeper to we’ve seen noticeable improvement in overall performance.”

“The most impressive thing in my opinion is that Diskeeper does its job without bogging down the server like so many other defraggers tend to do. I like the product; it’s easy to deploy, easy to maintain, and does its job transparently.”

Jeffrey Bradshaw, Senior PC Analyst, Southern Farm Bureau Life Insurance Co.

“I have used Diskeeper on server-class systems, and also Windows workstations. In both cases, the installation was simple and quick. The interface is well laid out, and reasonably straightforward. Diskeeper has features and abilities that the native defrag tool does not, so there are a few things to learn and is easily accomplished by anyone with even a modest IT background.”

“Once installed and configured, Diskeeper quietly works its magic with virtually no administrator interaction. I would regularly review the reports, but frankly that is optional for the most part.”

“Major advantages of using Diskeeper over the native defrag tool are that it can be configured to run automatically in the background and this is accomplished with virtually no noticeable resource drain on the system. These two points are sufficient reason to use the product. I think very highly of Diskeeper, and give it two thumbs up.”

Richard Gory, Lead Applications Developer, Information Technology
