

## DISKEEPER IS FAR SUPERIOR TO THE BUILT-IN

*“Diskeeper is rock solid, does what it’s supposed to do, and does not break like 80% of all other software. Window’s built-in defrag could keep the server functional, but it was a manual process. If you are handy with writing scripts you could schedule it but for us it was not worth the time. Diskeeper runs automatically with a thorough, deep defrag process. We run Diskeeper on all of our servers to keep them at optimal performance. I have been using it for 12 years and have not been disappointed in any way. Ease of installation, never had a conflict or issue of any kind. Just like one of the menu choices in Diskeeper, the “Set It and Forget It” scenario really applies.”*

**Matt Bigogno, The Catholic Health Association**

*“We have not used the Windows built-in defrag in several years. It consumed more CPU, required scheduling and had conflicts with SQL locked files and other custom apps we use. Diskeeper resolved all of these issues; it’s very efficient.”*

**Charles Brown, Network Administrator, Unum Provident #239 Fortune 500 list**

*“There is without a doubt a big difference in performance after you have defragmented a hard drive. I recommend the Automatic defrag to others, especially if they are still using Windows XP. The defrag in Win XP is worthless. The Windows 7 defragger is much better but Diskeeper is still far better. Diskeeper has more options and gives you much more information, but the best thing is the IntelliWrite technology.*

*“I think Diskeeper is great. Our biggest reason for poor performance was machines that were fragmented. Now it does not matter if the users know how to defrag or not, because Diskeeper runs in the background automatically and they don’t even know.”*

**Kurt Kammerer, COO, Salt River Project**

*“Diskeeper has been a trusted solution in our arsenal for the past ten years. We have deployed Diskeeper on mission critical servers in banks, dental offices, and construction companies. Some of these servers support 250 users and we have had no issues related to the software. We first sought out Diskeeper as a solution for highly-fragmented server drives where the Windows built-in defrag software was useless.*

*“Performance skyrocketed on the networks when we deployed Diskeeper and we found that hardware issues decreased. Diskeeper is the industry standard and the only defrag software we use with our corporate clients.”*

**Carl Young, President, PlanetCom Inc.**

*"We found that Diskeeper EnterpriseServer is easier to install and configure than what we were expecting. It runs perfectly on all the servers with absolutely no issues. As far as performance goes, we couldn't be happier. Diskeeper made it so much easier to maintain optimized disks. Prior to installing Diskeeper, we either did manual processes or used the built-in defrag utility with some batch file scripting. Needless to say, that process was far from satisfactory."*

**Brian Fay, Director of I. T., Sidney Health Center**

*"We have used Diskeeper on our own laptops and server since starting the company. I used to rely on the Windows built-in defrag tool or a freeware option for clients and PC's but realized that Diskeeper offers a much better solution. We have fewer alerts on the servers with Diskeeper installed. We consistently see big improvement in backup times after we clean up file servers with Diskeeper. Our company's policy is to include Diskeeper in our managed service offering on servers and strongly recommend it, especially for high priority workstations. Best of all, we enable IntelliWrite for a true "Set It and Forget It" solution."*

**Mark Glowacz, Integrator, Tydan IT**

*"We use Diskeeper with our SAS Business Intelligence software and it makes a significant improvement on the performance of the application. The batch processes used to take 6-8 hours to run, and the Windows built-in defrag would sometimes lock the files and cause the batch processes to fail. Once Diskeeper was installed we could see that it was defragging the file system continuously and our batch processing times dropped to 4 hours. We do utilize IntelliWrite and that's why we see the performance increase."*

**Sidney Wong, Technical Lead, CHEP, North Ryde, New South Wales**

*"I had two servers that were highly fragmented. One is a file server that has the users My Documents redirected to it and the other is a mail server. I tried the Windows built-in defrag on both servers and had numerous problems. The built-in would literally take days to run and would still not defrag the drives properly."*

*"I purchased Diskeeper with Instant Defrag and the results have been great. I can now run a manual defrag on the servers and it is finished within 30 minutes or less. The IntelliWrite and Automatic defrag also help. I will be purchasing more copies for some other servers soon."*

**Jeff McKinney, Systems Administrator, Fairfield City Schools District Office**

*"Diskeeper's automatic defrag was the biggest selling point for us. Windows machine performance degrades over time and although scheduling a defrag with the built-in tool is an option, we found that the performance was not as good, was of higher impact to the end user and has no central management."*

*"The greatest ROI has been IT time savings. This is seen in a reduction of time it takes to push patches and applications. High fragmentation levels cause plenty of issues, not just headaches to the end user. If the hard drive is defragged appropriately then installations of patches go faster."*

**Zach Groves, Network / Security Analyst, CenterPoint Properties**
