LEFTHAND SAN DOESN'T CRASH ANY MORE

"I have noticed an improvement in our Servers and Lefthand SAN resource utilization with the latest version of Diskeeper. Diskeeper is less resource intensive which can be attributed to IntelliWrite technology.

"As Diskeeper is the market leader in disk defragmentation and has been independently tested many a time, we have not done any comparison testing with other products except for the built-in product in Windows; there are numerous advantages to the commercial product over the built-in defrag tool."

Eric Perez , **Information Technology & Infrastructure Manager** ,**Sage MicrOpay**

"I would be happy to give you references for Diskeeper AND I can answer their questions. We have a 12TB starter SAN from Lefthand. The largest problem I was running into was system instability. I have one machine that is very sensitive to everything, but in particular before I installed Diskeeper, it was not a stable system. Now that it has Diskeeper installed, the stability has been much improved – the SAN system doesn't crash anymore."

Kris Kranz, Blarney Castle Oil

"Diskeeper makes our work easier plus the background Automatic defrag and scheduled defrags are the 'Bomb'. Our systems were slow prior to installing Diskeeper.

"Very Important: I use Diskeeper routinely to schedule off-hour CheckDisk maintenance & reboots. This feature alone makes Diskeeper a highly valuable Network/Server tool with our <u>Left Hand SAN</u>. For example, monthly Microsoft updates require reboots after installations so I do this using Diskeeper Boot Time Defrag. This is for all our school & admin servers."

Darryl Bechtel, Network Engineer (MCSE, Network+), Harrison School District 2

"I am glad to give references for Diskeeper. We have been using Diskeeper Server for years. I used to receive frequent alerts on server drive fragmentation. After installing your Diskeeper, I have yet to see an alert and have noticed no impact on overall system performance.

We are running a few Oracle 9i databases at our site. We have 5 Cybernetics DAS RAID 5 arrays, 1 Lefthand Network iSCSI SAN, a Dell EMC / AX100i iSCSI SAN, and an EMC CX-310 fibrechannel SAN at our site. We also have a Dot Hill fibrechannel SAN for email archiving. We have multiple Lotus Notes production and failover servers and use VMware ESX on 4 host servers running this software.

"Thanks for a great product."

Benji Hanson, ORD Enterprise Engineering, Environmental Protection Agency
