

SAVE MONEY WITH UNDELETE

“The Undelete software that we use on all our Regional Servers is undoubtedly worth every penny. It has saved our Techs numerous hours in restoring files inadvertently deleted as opposed to having to restore from backup tape.”

Michael Lucas, Gancom (Division of Gannet Fleming)

“We love Undelete and converted our systems to VMware ESXi. We use it on our five mail servers and file servers and have been very satisfied – we definitely got our money’s worth with Undelete.”

David Jenkins, Systems Admin, New York State Higher Education Service

“Undelete has worked very well for us. We had been discovering that data was being deleted months prior before we realized it was gone. The backup tapes write over each week and also each quarter so we lost the data. Each morning I review and cross reference our backup with the Undelete data. If I find a large amount of data is added to Undelete, I do a query. A few times I found that information files were inappropriately deleted and we were able to save the files.”

Dana R. Hirschberg, Analytical Environmental Services

“Story to tell? Oh yes. Our entire commissions database was saved by the Undelete program. Very happy about that. We would have lost a week of commissions (over 2000 records easily). We were very grateful that we had your product.”

Frank Broggi, Technical Manager, World Travel, Inc.

“We find the Undelete software invaluable to our organization. Our users are quite happy with the ability to restore/replace what has accidentally been deleted, in a matter of minutes as opposed to having to wait hours for tapes to be delivered from an offsite storage facility.”

Robert Segui, Network Administrator, Freeman Company - a Billion Dollar company

“We use the Undelete on all of our file servers and it’s great for Windows and virtual systems. I would be happy to answer any questions about Undelete. It saves us countless hours on having to restore from tape. We are very happy with Undelete. We use it almost weekly and the ability for it to save more than one version of a Word doc, or digging through backup logs for the right version of a file, definitely pays for itself.”

Michael Downs, Alaska Department of Environmental Conservation
