

UNDELETE HELPS ON VIRTUAL SYSTEMS

"We use the Undelete on all of our file servers; it's great for Windows and virtual systems. Undelete saves us countless hours on having to restore from tape. We are very happy as we use it almost weekly. The ability to save more than one version of a Word doc, or to prevent digging through backup logs for the right version of a file, definitely pays for itself."

Michael Downs, Alaska Department of Environmental Conservation

"We run Undelete with InvisiTasking on our file servers which all have VMware ESX. As we use Undelete on two files servers that have been virtualized, we have had it installed both pre and post virtualization and have experienced no difference in the performance of Undelete. The product is an active part of our file and directory restores and makes our system work a lot easier!"

D. Arell Chapman, AVP Network Administration, United Bankcorp

"We use Undelete fairly regularly on our main file share server and it works extremely well. Our implementation is on a VMware virtual guest which the Help Desk uses. This relieves the System Administrators of this fairly simple task. It also expedites file recovery which is great from a customer service standpoint."

Terry Ricke, Systems Administrator, Federal Home Loan Bank of Des Moines

"We love Undelete. We use it on our five mail servers & file servers which we converted to VMware ESXi and have been very satisfied – we definitely got our money's worth with Undelete."

David Jenkins, Systems Admin, New York State Higher Education Service

"I accidentally deleted an important VMware file that was my development partition for one of my projects, thinking I had a backup. When I realized that I did not, I was able to download Undelete, install it, and recover the file that was lost as a result of pressing Shift+Delete on my keyboard. Undelete saved my bacon on that one."

Jerry Kelly, MaxQ IT Group

"Undelete works great on our many VMware virtual servers. Absolutely I recommend it to anyone in a Windows server environment."

Mark Williams, Network Admin, Walled Lake Consolidated School District

"We are running Undelete with VMware ESX and it is working wonderfully. We are very satisfied with the software."

James Stein, Systems Admin, Office of the Federal Public Defender, Northern District of Florida
