

UNDELETE - INSURANCE COMPANY REFERENCES

"I would have already had several 'resume generating' incidents were it not for Undelete. I could not imagine running my shop without using it on my file servers. There is no predicting how inventive a user can be at deleting data that shouldn't be deleted – and using Undelete is far faster than grabbing something from the last backup.

"We have made use of the version capability of Undelete. Often a user will save over a good file with a bad file and by going back a version (which often cannot be done with daily backups) we have saved many hours of labor.

"Undelete has been a stable product that does exactly what you need and want it to do."

Jim Richardson, Network Administrator, Liberty Global Insurance

"Undelete rocks! We've been using it on our file servers for years. Basically we backup to disk, then backup to tape (B2D2T) as well; however, when you are talking about a storage array with multi-TBs of data, it becomes more difficult to find windows where retrieving a single file from disk or tape is even possible during that window. I don't even have to monkey with the backup systems. I get as much detail from the user as I can and pop the file back in place.

"Undelete is priced right. With InvisiTasking its overhead is low, and it couldn't be easier to install and use... so what's not to be enthusiastic about? How often do you come across software that actually works so well?"

A.Thomas Cammarota, Operations Manager, XL Group
