

UNDELETE - TRANSPORTATION SITES

“Over the past years we have become extremely reliant on Undelete for our main file server. We have directories with thousands of files in them that get deleted and periodically we are asked to recover them. Undelete has eliminated the need to go to tape for all but extremely old data and then only on rare occasions. Our users are always impressed when we can instantly recover a file to the network drive when they have accidentally changed or deleted it. It used to take time to retrieve tapes from storage to restore needed files only to realize many times the restored file was less than useful because it was from the previous day.

“Undelete allows us to view real time deleted versions of files prior to recovery, even further reducing restoration of un-usable files, and the ability to identify who last deleted/alterd a file has been useful in identifying problems on several occasions.”

Jeff Vargason, IT Systems Manager, Barr Nunn Transportation, Inc.

“Story to tell? Oh yes. Our entire commissions database was saved by the Undelete program. We were very happy about that. We would have lost a week of commissions (over 2000 records easily). We were very grateful that we had your product.”

Frank Broggi, Technical Manager, World Travel, Inc.

“I would certainly give a reference to the Diskeeper and Undelete products with Invisitasking, as I use both of them and have for many years. I can explain the benefits of the application and how we use it within our environment in conjunction with other applications to make our life easier.”

Ralph Spevere, IT Operations Manager, Hendrickson Trailer Suspension Systems
