

## UNDELETE SAVES TIME AT ENERGY SITES

*“During the four years we have been using Undelete, this has saved countless time in restoring files that are deleted on our servers. All too often users delete files by accident and need them restored. Backup tapes are good, but require time to load and catalog.*”

*“Undelete allows me to restore files while the user is still on the phone. They are always amazed!”*

**Scott Richardson, Nevada Department of Energy**

*“Undelete is great! I have it installed on our main file server and have used it for zero-day file restores (deleted before backup can protect them). I am very happy with it.”*

**Brian Longworth, Orcas Power & Light Cooperatives**

*“Undelete is by far one of the best solutions I’ve found for one click restores. It’s simple and lightweight, taking only minutes to install and configure. It saves me much time and money over recalling tapes that are stored offsite at Iron Mountain, every time one accidentally deletes a file.”*

**Scotty Vines, Manager of Networking Infrastructure and Systems, Breitburn Energy**

*“We have found Undelete with InvisiTasking to be extremely useful. Some of our technicians play with the users telling them that we’ll have to check the tapes. This makes users squirm a bit so they’ll think twice about deleting. Of course, the tech restores the files in a much shorter time than if they had to resort to requesting off-site tapes which require notifying another company to have them sent overnight).*”

*“Undelete allows our techs to accomplish a task in minutes. They are then able to move on to resolve other issues. Without the program, an already tasked person would be tied up for hours.”*

**John Wayne Allmon, Network Administrator, Berg Electric**
