V-locity Endpoint 1.0 Release Notes

Overview

V-locity® Endpoint is an upgrade to Diskeeper® 12 Professional. V-locity Endpoint reduces I/Os to disk with its patented IntelliMemory® DRAM caching technology and fragmentation prevention with IntelliWrite® technology. V-locity Endpoint includes:

- New Features:
    - IntelliMemory® DRAM caching technology that reduces I/Os to disk by intelligently caching active data
    - Disk Health Monitoring leverages S.M.A.R.T data to notify admins when disk failures may be eminent
    - Enhanced reporting displays health and performance gains for the system. Reports include: Before/After Benefit Analyzer report, Recent activity report, and 7-day history
- IntelliWrite® 2.0 has been enhanced to prevent fragmentation from occurring so that files are written in an optimal sequential state
- InvisiTasking® 2.0 intelligent monitoring technology has been enhanced to allow V-locity "background" operations within the system to run with zero resource impact on current activities. It also accounts for remote access to local drives
- Instant Defrag™ has been enhanced to work only on files that are known to cause performance problems that were not caught by IntelliWrite® in real-time
- HyperFast technology for SSDs that makes the SSD writes faster without causing excessive SSD wear

Notes:

- When over installing over previous installations, previous configuration settings will not be preserved.
- For those who use the Diskeeper Administrator management console, please ensure you upgrade to the most recent version before using it to deploy V-locity Endpoint to systems on your network
