

## V-LOCITY- BEST RESULTS FOR HYPER-V

*“V-locity solves problems before they occur; they can run more machines, faster. The synchronization of the host and guest is a huge benefit as well as the ability to compact VHD files. I purchase V-locity because the benefits are incredible. The ability to “Set it and Forget it” and be assured of not seeing impact to the Hyper-V guests is enough to sell me, but ConduSiv Technologies goes beyond that. The ability to get rid of white space in VHD files is very important to me because I have had to leave large amounts of wasted space in place.”*

**Rick Gordon, Field Technical Support, HP Enterprise Services, FranklinCovey**

“V-locity benefits such as reduced operating costs and extended hardware life are interconnected. We see lower maintenance costs because of machine slowdowns and a greater lifespan for drives.

“In our Hyper-V environment, we were starting to have longer response times from our file servers. After installing V-locity we’ve noticed a performance increase in the desktops and a large gain in our Hyper-V environment. V-locity is easy to maintain and support.

“The visible part is less crashes and better overall stability, even in low space drive computers. Our computers are two years old and still don’t suffer from heavy fragmentation. We rely mainly on server side data, so the big difference was in our virtualized platform.”

**Antônio Soares, Responsável, Fertagus - Travessia do Tejo, Transportes S.A.**

*“I have installed V-locity and love it. I installed V-locity first on the Hyper-V servers that I consider to be critical. V-locity is one of those set-and-forget type utilities that just works. It does a great job with no intervention from me. I’m busy so I want a product I can trust to work on its own while returning the best possible results and ConduSiv Technologies products do just that.”*

**Jeff Ferrell, Systems Administrator, Knoxville Community Development**

“We have been a customer for years, and when we began the switch to virtualization using Hyper-V, V-locity was suggested to help improve performance of the VMs. V-locity has proven to be a valuable tool in our virtual environment. Much like Diskeeper, this is a “Set It and Forget It” type of software. The IntelliWrite technology is a huge factor in the overall great disk performance we are seeing on our virtual platforms by preventing most fragmentation from ever occurring. Also, InvisiTasking helps ensure that the defrag process doesn’t affect other VMs. We are very pleased with the steady performance state we are seeing from our VMs due to the implementation of V-locity.”
